***LEDlink***

***LEDlink***

The background image shows a modern interior space, likely a hallway or a room with a grid ceiling. There are several recessed lighting fixtures, some of which are illuminated, creating a warm glow. The ceiling is made of dark, rectangular panels. The walls are also dark, and there are some reflective surfaces. The floor is made of light-colored tiles. A red horizontal bar is at the top of the page.

LEDLink emerged in 2012 as a brand created for professionals from the initiative of people from the LED industry. From the beginning, based on many years of experience in design, production and sales, we rely on modern and lasting solutions and partnerships with our customers. Quality and reliability are top priorities. A consistently high level of transparency in cooperation and sales is a prerequisite for our brand.

Thanks to the acquired know-how and an attentive pursuit of market trends, we are able to offer our customers modern products which are optimally adapted to the individual market areas. A wide range of products allows us to respond quickly and efficiently to customer requirements and to meet them to their fullest satisfaction. The professional solutions developed by us distinguish an optimal price-performance ratio.

The close cooperation with leading companies in the lighting industry led to the creation of numerous unique products adapted to your requirements. We work closely with our customers during each phase of design or production. Our high quality and individual solutions enable our partners to gain a competitive advantage in this market.

Our production processes allow us to produce predefined LED complete sets for direct assembly in the final product. This results in a considerable time saving while at the same time increasing the competitiveness of the product through a reduced work and price.

To complement our offer and to meet the requirements of the dynamically developing market, we also manufacture drivers for POS systems (point of sale). Our products are available in showcases, profile letters, light boxes, entrance portals, furniture and POS systems as an integral and functional component.

We look forward to work with you.

## LED MODULES

### S-SERIES

3 Years Warranty

1.01 - 1.02

ves<sub>3</sub>

Economical LED module with a wide beam angle for use in flat profile letters or transparent billboards.

1.03 - 1.04

mini<sub>3</sub>

Very compact LED module with high light output. Perfect for use in narrow, small, flat and angular illuminated billboards.

1.05 - 1.06

mini<sub>4D</sub>

Compact size LED module perfect for indoor use.

1.07 - 1.08

micron<sub>5V</sub>

Micro LED module with minimal dimensions and the possibility to solder it on both sides. Micron5V modules are ideal for very shallow transparent letters.

1.09 - 1.10

unix<sub>3</sub>RGB

RGB LED module for installation depth ranged from 100 mm up to 200 mm. The color of the module can be changed as desired using a controller.

1.11 - 1.12

vidia<sub>3</sub>RGB

RGB LED module with a beam angle of 140 °. For installation depth ranged from 80 up to 200 mm. The color of the module can be changed as desired using a controller.

### L-SERIES

5 Years Warranty

2.01 - 2.02

dEUS<sub>3</sub>

Extremely powerful LED module with a wide beam angle. Ideal for large area advertising. Optimum installation depth is 100 mm to 250 mm.

2.03 - 2.04

vidia<sub>3</sub>

Powerful LED module with a wide beam angle for use in flat banners or profile letters.

2.05 - 2.06

unix<sub>3</sub>

Highly reliable LED module for medium depth to deep advertising systems.

2.07 - 2.08

dEUS<sub>2</sub>

Extremely powerful LED module with a wide beam angle. Ideal for large area advertising. Optimum installation depth is 60 mm to 140 mm.

2.09 - 2.10

vidia<sub>2</sub>

Efficient 2-diode LED module with a wide beam angle for use in shallow banners and profile letters.

2.11 - 2.12

miniBOX

LED module for use in double-sided light boxes.

## X-SERIES

7 Years Warranty

3.01 - 3.02

dEUS<sub>3X</sub>

Extremely powerful LED module with 7-year warranty and a wide beam angle. Ideal for large area advertising. The optimal installation depth is 100mm to 250mm.

3.03 - 3.04

vidia<sub>3X</sub>

Powerful LED module with 7-year warranty and a wide beam angle for use in shallow advertising systems.

3.05 - 3.06

BOXlight

Reliable module with 7-year warranty for use in double-sided transparent billboards.

## LED STRIPES

### LinkS SERIES

4.01 - 4.02

LinkS<sub>150</sub>

LED stripe with 150 diodes per 5m roll. Can be divided into 100mm sections.

4.05 - 4.06

LinkS<sub>300</sub>

LED stripe with 300 diodes per 5m roll. Can be divided into 50mm sections.

4.09 - 4.10

LinkS<sub>600</sub>

LED stripe with 300 diodes per 5m roll. Can be divided into 25mm sections.

### LinkS<sub>p</sub> IP65 SERIES

4.03-4.04

LinkS<sub>150P</sub>

LED stripe with 150 diodes per 5m roll and IP65 protection. Can be split into 100mm sections.

4.07-4.08

LinkS<sub>300P</sub>

LED stripe with 150 diodes per 5m roll and IP65 protection. Can be split into 50mm sections.

4.11-4.12

LinkS<sub>600P</sub>

LED stripe with 150 diodes per 5m roll and IP65 protection. Can be split into 25mm sections.

### SERIE LinkH

4.13 - 4.14

LinkH<sub>300</sub>

Extremely powerful LED stripe with 300 diodes per 5m reel. Can be divided into 50mm sections.

## RGB LED STRIPES

### LinkRGB SERIES

4.15 - 4.16

LinkS RGB<sub>150</sub>

RGB LED stripe with 150 diodes per 5m-roll. Can be divided into 100mm sections.

4.19 - 4.20

LinkS RGB<sub>300</sub>

RGB LED stripe with 150 diodes per 5m-roll. Can be divided into 50mm sections.

### LinkRGB<sub>p</sub> IP65 SERIES

4.17-4.18

LinkS RGB<sub>150P</sub>

RGB LED stripe with 150 diodes per 5m roll and IP65 protection. Can be divided into 100mm sections.

4.21-4.22

LinkS RGB<sub>300P</sub>

RGB LED stripe with 150 diodes per 5m roll and IP65 protection. Can be divided into 50mm sections.

# SERIES

The background of the advertisement features a large, stylized number '3' in white. The interior of the '3' is filled with a close-up photograph of an LED strip light. The strip is white with a green protective lens over the LEDs. Some LEDs are illuminated, showing a bright green light. The PCB of the strip is visible, with labels like 'LEDlink / RED' and '+ -' printed on it. The overall background is a solid red color.

ves<sub>3</sub>

Economical LED module with a wide beam angle for use in flat profile letters or transparent billboards.

Ves<sub>3</sub> is an economical solution with a wide beam angle (140 °) and good light output. This makes it ideal for flat banners or profile letters. Thanks to high protection degree IP68 this module can be used in the wet outdoor area. The assembly is very simple thanks to the double-sided 3M™ industrial adhesive tape and fixing hole. It is possible to connect up to 50 modules in series.

TABLE OF CONTENTS 

# mini<sub>3</sub>

Very compact LED module with high light output. Perfect for use in narrow, small, flat and angular illuminated billboards.

Mini<sub>3</sub> module has a beam angle of 160°. This makes it possible to achieve uniform illumination even in shallow installations. Very small dimensions allow to use it in extremely small, flat and narrow profile letters. Thanks to double-sided 3M™ industrial adhesive tape installation is very simple. Because of IP68 protection degree mini<sub>3</sub> can be used in the wet outdoor areas. The module is also protected against mechanical damage by the optimized plastic housing. It is possible to connect up to 50 modules in series.

TABLE OF CONTENTS 

# mini<sub>4D</sub>

Compact size LED module perfect for indoor use.

Mini4D module is an excellent choice for indoor advertising, and POS systems. Compact dimensions are it's main advantage. The length of the cables between the modules can be adapted according to customer requirements. Mounting holes facilitate assembly. It is possible to connect up to 70 modules in series.

TABLE OF CONTENTS 

# micron<sub>5V</sub>

Micro LED module with minimal dimensions and the possibility to solder it on both sides. Micron5V modules are ideal for very shallow transparent letters.

Micron5V modules have been specially designed for transparent and small projects. They can be placed in milled grooves and illuminate the front of the letter from behind. The modules can be mounted on a back wall as shown in the drawing. Thanks to the beam angle of 120 ° or 175 °, even very shallow systems can be illuminated homogeneously from approx. 30 mm. The modules can be soldered from both sides thanks to their special design. Cable length can be adjusted according to customer needs. It is possible to connect up to 50 modules in series.

LED MODULES  
1.09

# unix<sub>3</sub> RGB

RGB LED module for installation depth ranged from 100 mm up to 200 mm. The color of the module can be changed as desired using a controller.

Unix<sub>3</sub> RGB module is suitable for lighting projects with changing colors. For proper operation, a separate RGB controller is required. In the case of a larger number of modules, an RGB amplifier must be added. Thanks to the IP68 protection degree is also possible to use it in the wet outdoor area.

# dEUS<sub>3</sub>

Extremely powerful LED module with a wide beam angle. Ideal for large area advertising. Optimum installation depth is 100 mm to 250 mm.

With the enormous value of 120 lm per module (100 lm / W), dEUS<sub>3</sub> stands out thanks to its very high light output and wide beam angle (160 °). Because of that very homogeneous light can be achieved. The installation is very easy with use of the double-sided 3M™ adhesive tape and fixing hole. The dEUS<sub>3</sub> is protected against mechanical damage by a robust plastic housing. Thanks to the IP68 protection it is suitable to use in the wet outdoor area. It is possible to connect up to 30 modules in series.

Because of that very homogeneous light can be achieved. The installation is very easy with use of the double-sided 3M™ adhesive tape and fixing hole. The dEUS<sub>2</sub> is protected against mechanical damage by a robust plastic housing. Thanks to the IP68 protection it is suitable to use in the wet outdoor area. It is possible to connect up to 30 modules in series.

LED MODULE  
2.09vidia<sub>2</sub>

Efficient 2-diode LED module with a wide beam angle for use in shallow banners and profile letters.

Vidia<sub>2</sub> is distinguished by a wide beam angle (160 °) and high light output. Thanks to the small dimensions it is a very good addition to the vidia<sub>3</sub> and perfect solution for small, shallow and narrow profile letters. Assembly is very simple thanks to the double-sided 3M™ industrial adhesive tape and fixing hole. Vidia<sub>2</sub> is protected against mechanical damage by an optimized plastic housing. IP68. allows to use the module in wet outdoor areas. Up to 50 modules can be connected in series.

LED MODULE  
2.11

# miniBOX

LED module for use in double-sided light boxes.

MiniBOX module is a frame module with lens for illuminating double-sided light boxes from approx. 100 mm depth. It creates a uniform illumination of the transparent billboards. The installation is very easy with the double-sided 3M<sup>™</sup> adhesive tape and fixing holes. The miniBOX module is protected against mechanical damage by a robust and optimized plastic housing. Thanks to the IP67 protection degree it can be used in wet outdoor area. It is possible to connect up to 21 modules in series. The miniBOX modules can be separated after each third module. The place of separation is marked.

# dEUS<sub>3X</sub>

Extremely powerful LED module with 7-year warranty and a wide beam angle. Ideal for large area advertising.

With the enormous value of 120 lm per module (100 lm/W), dEUS<sub>3X</sub> stands out thanks to its very high light output and wide beam angle (160 °). Because of that very homogeneous light can be achieved. Thanks to the constant current system, dEUS<sub>3X</sub> has a 7-year warranty. The installation is very easy with the double-sided 3M™ adhesive tape and fixing hole. dEUS<sub>3X</sub> is protected against mechanical damage by a robust and optimized plastic housing. Thanks to the IP68 protection degree it can be used in the wet outdoor areas. It is possible to connect up to 30 modules in series.

# vidia<sub>3X</sub>

Powerful LED module with 7-year warranty and a wide beam angle for use in shallow advertising systems.

Vidia3X module has a 7-year warranty, a wide beam angle (160 °) and a high light output (up to 89 lm / W). Vidia<sub>3X</sub> modules have a constant current System. Thus it is an ideal solution for shallow banners or profile letters. The assembly is kept very simple by double-sided 3M™ industrial adhesive tape and fixing holes. Vidia<sub>3X</sub> is protected against mechanical damage by an optimized plastic housing. Thanks to the IP68 protection degree it can be used in the wet outdoor areas. It is possible to connect up to 50 modules in series.

# SERIES

The background of the entire page is a close-up photograph of a kitchen range hood. A bright yellow LED strip light is installed inside the hood, casting a warm glow. The hood's surface is metallic and reflective. A large, white, curved graphic element, resembling a stylized 'S' or a thick brushstroke, is overlaid on the image, separating the top and bottom sections. In the bottom left corner, there is a small, square inset image showing a close-up of the LED strip light's components, including the yellow light-emitting diodes and the black PCB.

# LinkS<sub>600</sub>

LED stripe with 600 diodes per 5m roll. Can be divided into 25mm sections.

LinkS<sub>600</sub> is a stripe with 600 diodes per 5m roll. It is ideally suited for illuminating light boxes, POS systems, furniture and interior elements. Thanks to the high number of diodes, the various projects can be illuminated very strongly and uniformly. Double-sided 3M™ industrial adhesive tape on the back is used for assembly. The LinkS<sub>600</sub> stripes are powered by a 12 VDC power supply and have a 2 year warranty.

# LinkS<sub>600P</sub>

LED stripe with 600 diodes per 5m roll and IP65 protection. Can be divided into 25mm sections.

LinkS<sub>600P</sub> is a stripe with 600 diodes per 5m roll. Thanks to the IP65 protection, these stripes are also suitable for outdoor use. It is perfect for illuminating light boxes, POS systems, furniture and interior elements. Thanks to the high number of diodes, the various projects can be illuminated very strongly and uniformly. Double-sided 3M™ industrial adhesive tape on the back is used for assembly. The LinkS<sub>600P</sub> stripes are powered by a 12VDC power supply and have a 2 year warranty.

# LinkH<sub>300</sub>

Extremely powerful LED stripe with 300 diodes per 5m reel. Can be divided into 50mm sections.

LinkH<sub>300</sub> is an extremely bright stripe with 300 Samsung diodes each 5m-roll. It is ideally suited for illuminating light boxes, POS systems, furniture and interior elements. The powerful diodes can be used to illuminate a wide variety of projects. Double-sided 3M™ industrial adhesive tape on the back is used for assembly. LinkH<sub>300</sub> stripes are powered by 12 VDC and have a 2 year warranty.

# LinkS RGB<sub>150</sub>

RGB LED stripe with 150 diodes per 5m-roll. Can be divided into 100mm sections.

LinkS RGB<sub>150</sub> is a RGB stripe with 150 diodes per 5m roll. It is excellent for very light lighting of light boxes, POS systems, furniture and elements of interior design. A separate RGB controller is required for proper operation. For larger projects an RGB amplifier must be added. Double-sided 3M™ industrial adhesive tape on the back is used for assembly. The LinkS RGB<sub>150</sub> stripes are powered by 12 VDC and have a 2 year warranty.

## TECHNICAL DATA

# SPEZIAL- ANWENDUNGEN

**LEDlink**

[www.ledlink.de](http://www.ledlink.de)

# LED modules adapted to the project and customer requirements

The technical progress and the strong orientation to our customer requirements allow us to produce innovative solutions. Even in the case of irregular shapes, the modules are ideally adapted to the outline as well as to the other conditions of the project. Thus, we can extremely reduce the production time of advertising equipment.

The previous solutions were based on a manual installation of LED modules within a mold. This is a tedious work with a great risk of error.

A close cooperation with the customer allows us to produce a product which meets the desired requirements perfectly. During production process, each phase is precisely adapted in close consultation with the customer.

Thanks to these special constructions, even an 8-time reduction in the assembly at a higher quality is possible. This results in price reduction of the final product and an increase in competitiveness.

Through the use of modern production lines, we are able to deliver products of extremely high precision and quality. This has unachievable with conventional solutions.

Modules from this production area have a 3-year manufacturing warranty.

Example application: Prefabricated LED module in letter form, ready for immediate use. The shape can be modified as desired.

# INSTRUCTIONS FOR ASSEMBLY

- All exact specifications and specific technical information can be found on the respective data sheets of the products.

---
- The installation and connection of LEDLink products must be carried out exclusively by qualified personnel, taking this instruction into account. Failure to observe these instructions can lead to malfunctions, failure or shortening of the service life.

---
- The power supply may only be implemented by power supply units which are intended for the LED requirements. It is imperative to choose the correct output voltage for the product to be supplied.

---
- The required power of the modules, strips, etc., must be correctly calculated and should not exceed 80% of the rated power of the power supply.

---
- Care must be taken to connect the modules, strips, etc. to the output of the power supply, taking into account the correct polarity. Open cable ends should be insulated in any case, especially for outdoor products, moisture must not enter the product through the open cables.

---
- The installation should be carried out on heat-resistant materials. To achieve perfect results, floor surfaces and side walls should be warmed. Thus, the light can be excellently reproduced.

---
- In most cases, modules and strips are equipped with 3M adhesive tape (see data sheet). These adhesive strips are used for pre-installation and alignment of the products. They should not be viewed as a temporary fixation measure. Depending on the product, it should be secured separately using suitable mounting screws, mounting brackets or mounting adhesives.

---
- During the installation, the maximum number of modules that are fed in series can not be exceeded (see data sheet). With LED stripes it is usually 5m (see data sheet). The modules or strips should not be mounted too far away from the power supply.

---
- No liability is accepted as soon as LEDlink products are processed mechanically or chemically.

# ELECTRICAL SCHEME

## LED MODULES

The max number of modules that can be fed in series can be found in the respective data sheets.

## LED STRIPES

There may be max. 5 m of stripe connected in series.

# COMMON PROBLEMS

PROBLEM	POTENTIAL CAUSE	POSSIBLE SOLUTION
All modules / stripes flash	Overload by too much power for a too small power supply	Check the max. 80% of the rated power from the power supply
LED's light up weak	Overload by too much power for a too small power supply	Check the max. 80% of the rated power from the power supply
	Too many modules fed in series	Check if too many modules are connected in series according to the data sheet
Subareas does not light up	Wackelkontakt, incorrectly clamped, electr. Short circuit	Check connections between power supply and lamp, check polarity
Complete failure of the entire system	Fault in the local power supply, power supply protection triggers short circuit	Check the fuse
		Turn input voltage once OFF and ON again
		Switch off the power and remove the short circuit
Subareas does not light up	Wackelkontakt, incorrectly clamped, electr. Short circuit	Check connections between power supply and lamp, check polarity
Complete failure of the entire system	Fault in the local power supply, power supply protection triggers short circuit	Check the fuse
		Input voltage once OFF and ON again
		Switch off the power and electr. Remove the short circuit
Shading on the illuminating surface	Components such as a power supply, terminals or cables will cast shadows	Place the power supply wherever you want and attach the cables, etc.
Shading since the lamp is lit in the wrong direction	Module / Stripes badly attached / secured, thus no longer in the correct position	Module grid is not correct
		Refit the lamp and secure it properly
